

International workshop and training school on

Electrochemistry in Historical and Archaeological Conservation

11-15 January 2010

Lorentz Center, Leiden, Netherlands

Aim

The workshop will offer a discussion platform for all active professionals (conservators, conservation scientists and analytical scientists) interested in, or involved with, the use of electrochemical techniques for the conservation of archaeological and historic artefacts. Also, it will serve as a forum which allows Ph.D. students to present their work and discuss it with professionals. The workshop will review the current efforts in the field made both by analytical scientists and conservation professionals. Networking on topics of common interest will be discussed and promoted. In addition a strategy will be established for the dissemination of information and promotion of good practice guidelines to the conservation community. The workshop includes practical laboratory sessions and group discussions.

Topics

- Analysis, cleaning and stabilization
- Protection
- Testing and monitoring
- Novel techniques
- Standards
- Education

Registration until 30 September 2009 at

<http://www.lorentzcenter.nl/lc/web/2010/364/registration.php3?wsid=364>

Limited **travel grants** available. Please apply before 1 September 2009.
